

Reading: Glossary terms from module 1

Terms and definitions from Course 1, Module 1

Data professional: Any individual who works with data and/or has data skills

Data science: The discipline of making data useful

Data stewardship: The practices of an organization that ensure that data is accessible, usable, and safe

Edge computing: A way of distributing computational tasks over a bunch of nearby processors (i.e., computers) that is good for speed and resiliency and does not depend on a single source of computational power

Jupyter Notebook: An open-source web application used to create and share documents that contain live code, equations, visualizations, and narrative text

Machine learning: The use and development of algorithms and statistical models to teach computer systems to analyze patterns in data

Metrics: Methods and criteria used to evaluate data

Python: A general-purpose programming language
