

## Reading: Get started on Course 3

---

### Coming up next...

Congratulations on completing another course in the Google Business Intelligence Certificate! In this part of the program, you learned more about data modeling and ETL processes for extracting data from source systems, and transforming it into formats that better enable analysis and drive business processes and goals.

The entire program has four courses:

1. **Foundations of Business Intelligence:** In this course, you will discover the role of business intelligence professionals within an organization, as well as typical career paths. You will explore core BI practices and tools and how BI professionals use them to make an impact.
2. **The Path to Insights: Data Models and Pipelines:** This is the course you've just completed.
3. **Decisions, Decisions: Dashboards and Reports:** In this course, you will apply your knowledge of business intelligence and data modeling to create dynamic dashboards that track KPIs to meet stakeholder needs.
4. **Accelerate Your Job Search with AI** — Gain practical job search strategies and learn how to leverage AI tools (like Gemini and NotebookLM) to uncover your most valuable skills, create a job search plan, manage your applications, and practice for interviews as you navigate your path to your next role.

Now that you have completed this course, you are ready to move on! To continue with the program, you can go to the next course: **Decisions, Decisions: Dashboards and Reports**.

Keep up the great work!
